CAREER SUMMARY

Dynamic and results-driven Software Architect and Frontend Tech Lead with **10+ years of enterprise experience** designing, engineering, and scaling high-performance web applications. Proven track record across diverse domains, including **Commodity Market Intelligence, MarTech, Food & Beverage (F&B/Food Tech), CI/CD & DevOps Automation, E-Commerce, and Telecom**. Expert in defining frontend architectures, selecting modern tech stacks, and leading high-performing engineering teams from concept to production. Adept at managing end-to-end sprint execution, hiring, upskilling, and aligning engineering deliverables with strategic business roadmaps. Currently extending a decade of frontend architecture experience into **AI-native engineering – RAG pipelines, LLM integration, and agent-based tooling**.

SKILL SETS

Functional skills:

- F&B
- Food ordering
- Food delivery solutions
- CI/CD
- DevOps
- DevSecOps
- E-Commerce
- Telecom domain
- AI-native engineering (RAG, LLM integration)

Technical skills:

Languages	ES6, JavaScript, Python, TypeScript, HTML5, Velocity, Java
Web/UI technologies	Bootstrap 4, PrimeReact, Emotion (CSS-in-JS), CSS, CSS Preprocessors – Sass, Less, i18next/react-i18next (multi-language: English, Hindi, Kannada)
Framework & Libraries	ReactJS (+Redux, Hooks, Context API), Next.js, react-router-dom, Vue.js (+Vuex), AngularJS, EJS, Underscore/lodash, Express.js, Spring, REST Web Service, Chart.js, lightweight-charts, react-markdown, Swiper
AI & LLM	OpenAI API, Anthropic Claude API, pgvector (Postgres – RAG/vector search), Chroma (vector store)
Servers	Node.js (+Express server), WebLogic, Tomcat, Apache httpd server, Create React App + CRACO
Database	MongoDB, PostgreSQL, MySQL, Supabase (Postgres + realtime subscriptions), Firebase/Firestore
Web Services & Developer tools	Git, GitLab, Bitbucket, Jenkins, Azure DevOps Pipelines, Docker, Vagrant, AWS, Digital Ocean, Artifactory, WebSocket/realtime APIs, Razorpay, PayPal, Stripe, Google OAuth, etc.
Miscellaneous	Sentry, Jest, React Testing Library, PWA (service workers, Workbox), Google Tag Manager, Asana, ClickUp, CloudWatch, Notion, Twist, Jira, Rally, Splunk, Postman, Linux, Unix, etc.

PROFESSIONAL ABILITIES

- Responsibilities involved understanding the requirement documentation (PRD), breaking requirements into tech tasks (TRD), creating design documentation, reviewing UI/UX, interacting with other teams for dependent resources, coding, testing, and releases.
- Constantly monitor the production environment with tools like Sentry.
- Production issue RCA.
- Project management skills.
- Team management skills [Team OKRs, hiring, code reviews, breaking product roadmap down into team tasks, team motivation and learning].
- Trend-watching — looking out for new frontend and technology trends.
- Staying up to date on the product roadmap.
- Weekly sync with the marketing team to understand requirements/expectations.
- A creative approach to problem-solving.
- The ability to gather and interpret information.
- The ability to explain technical ideas clearly.
- The ability to work under pressure and to deadlines.

Company: CoffeeWeb Technologies, Bangalore

Company Profile: CoffeeWeb is a privately held market intelligence and technology platform headquartered in Bengaluru, India, serving as the definitive global hub for information, supply chain data, and digital resources in the coffee sector. Connecting over 200,000 users across 175+ countries, the platform provides comprehensive, tailored solutions designed to meet the unique operational needs of industry stakeholders, including exporters, importers, roasters, processors, producers, physical traders, and financial fund buyers.

Job Type: Remote

Duration: August 2023 – Currently working

Project: CoffeeWeb Platform, CoffeeWeb Admin

Role: Software Architect - Frontend

Description: CoffeeWeb is the all-in-one digital platform for the global coffee industry — real-time market data, news, weather, trade tools, and community in a mobile-first Progressive Web App.

Responsibilities:

- Working as a Software Architect - Frontend in the CoffeeWeb team, leading the entire frontend team and owning the technical direction for the global web platform.
- Responsible for defining the frontend system architecture, evaluating tech stacks, and making strategic technology selections for all CoffeeWeb products from scratch.
- Driving end-to-end planning, execution, and delivery of core platform interfaces using React.js, Next.js, JavaScript, TypeScript, ES6, and Node.js technologies.
- Accountable for full team management, setting up sprint workflows, task allocation, tracking project execution, and ensuring high-quality, timely production releases.
- Heading talent acquisition, tech interviewing, and team hiring processes to build and scale a high-performing frontend engineering team.
- Fostering a culture of continuous learning, mentoring developers, establishing best practices for peer code reviews, and designing technical upskilling roadmaps.
- Understanding specifications and design documents.
- Architected and led development of a mobile-first PWA spanning 16 product domains — real-time market data (WebSocket-powered live coffee quotes), pricing differentials, industry reports, weather, news & personalized content, community/social, AI assistance, trade & exchange, and subscriptions — serving 200,000+ users across 175+ countries in English, Hindi, and Kannada via i18next.

- Built tiered subscription and monetization flows (Regular, Gold, Platinum) with Razorpay, PayPal, and Stripe payment gateway integrations, trial management, subscription-gated feature access, and Google OAuth login.
- Adopted Supabase (Postgres + realtime subscriptions) and Firebase (Auth, Firestore, push messaging) to power live chat, notifications, and real-time market data feeds across the platform.
- Established the team's testing and quality foundation with Jest and React Testing Library (~165 test files), ESLint (airbnb-base + Prettier), and Husky/lint-staged pre-commit hooks, alongside Sentry error monitoring for production reliability.
- Owned CI/CD delivery via Azure DevOps Pipelines across development/staging/production environments, and drove growth tooling — Google Tag Manager, custom analytics events, and SEO meta management (react-helmet) for organic discovery.
- Participated in implementing features, fixing bugs, holding responsibility over various product boundaries, documenting architectural patterns, and supporting users in various forums.

Company: Peppo Technologies

Company Profile: Peppo is a MarTech company that helps brands with customer acquisition and retention using data-based solutions. Its products include an industry-agnostic headless loyalty and engagement infrastructure (RewardX), an integrated online ordering system for restaurants and cloud kitchens, and an e-invoicing solution that replaces paper invoices with WhatsApp-delivered invoices.

Job Type: Remote

Duration: August 2020 – May 2023

Project: BookMyShow Deals, Peppo PWA [Food Ordering App], Console [Merchant Console, DMS, RewardX], Event Ordering

Role: Lead Frontend Engineer

Description:

- **BookMyShow Deals** — this product will allow the BMS users to avail discounts on dine-in orders from restaurants listed on the BMS app. Customers will need to select the restaurant from the listed ones on the BMS app and pay the billed amount via the app to avail the X% flat discount on the purchase.
- **Peppo PWA [Food Ordering App]** — Peppo PWA is an online food ordering app, where users can order food from their respective restaurants.
- **Console [Merchant Console, DMS, RewardX]**
 - Merchant Console is a dashboard where merchants can get their food order and process it. Merchants can also see their sales, update menu, and do other operations required for the online food delivery dashboard.
 - DMS Console is the BookMyShow Deals console. It is used for onboarding merchants and their outlets. It also helps the onboarding team map outlets to venues to show relevant offers near the venue.
 - RewardX Console is a dashboard which offers a reward system that any merchant can use within their product to give their users a rewarding experience.
- **Event Ordering** — Event Ordering is an online meal reservation flow, which allows users to reserve pre- and post-event meals with offers near or within the event venue.

Responsibilities:

- Working as a Frontend Lead in the Peppo team, which develops and maintains the frontend for all Peppo products.
- Led the frontend engineering team from the ground up to architect, build, and deploy multiple high-traffic consumer web apps and B2B SaaS portals.
- Mostly worked on implementing UI utilizing Vue.js, JavaScript, TypeScript, ES6, HTML5, CSS3, and Node.js technologies.

- Engineered the mobile-first Peppo PWA food-ordering application and the Event Ordering reservation flow, ensuring rapid load times, smooth transitions, and reliable transactional steps.
 - Developed the consumer-facing BookMyShow (BMS) Deals interface, integrating secure checkouts and seamless payment workflows to handle real-time merchant dynamic discounts.
 - Architected the core suite of control panels including the Merchant Console for live order processing, the geographically-mapped DMS Console for partner onboarding, and the modular RewardX Console loyalty engine infrastructure.
 - Collaborated cross-team with product managers, backend developers, and UI/UX designers to translate complex product logic and specifications into clean, interactive user interfaces.
 - Participated in implementing features, fixing bugs, peer code reviews, holding responsibility over various product boundaries, documenting implemented features, and supporting merchants and customers in various technical forums.
-

Company: JFrog India

Company Profile: JFrog is on a mission to enable continuous updates through Liquid Software, empowering developers to code high-quality applications that securely flow to end-users with zero downtime. The world's top brands — including Amazon, Facebook, Google, Netflix, Uber, VMware, and Spotify — are among the 4,500+ companies that depend on JFrog to manage binaries for their mission-critical applications. JFrog is a privately-held, global company and a proud sponsor of the Cloud Native Computing Foundation (CNCF).

Duration: March 2019 – July 2020

Project: JFrog Pipelines

Role: Software Engineer, R&D

Description: JFrog Pipelines integrates across your DevOps environment, delivering orchestration at an unmatched scale from code to production.

Responsibilities:

- Working as a developer on the JFrog Pipelines team, which develops and maintains JFrog Pipelines.
 - Part of the JFrog Pipelines team from inception, building JFrog Pipelines from scratch.
 - Mostly worked on implementing UI utilizing Vue.js, JavaScript, TypeScript, ES6, and Node.js technologies.
 - Collaborated cross-team to implement high-quality, polished user interfaces using Vue.js to integrate JFrog Pipelines into platform-ui (JFrog's all-in-one product platform).
 - Understanding specifications and design documents.
 - Participated in implementing features, fixing bugs, peer code reviews, holding responsibility over various product boundaries, documenting implemented features, and supporting customers in various forums.
-

Company: Shippable India

Company Profile: Shippable helps automate CI/CD and DevOps activities and creates streamlined workflows across teams and tools. Started as a hosted CI service in 2013, the platform evolved to support a holistic set of DevOps workflows across all teams involved in shipping software — Dev, Test, Ops, DevOps, SecOps, etc. Shippable is available as an on-premises server product, hosted SaaS, and a hybrid offering called Custom Nodes.

Duration: March 2018 – March 2019

Project: Shippable Platform

Role: Software Development Engineer

Description: CI, CD, and DevOps automation platform with Docker support that simplifies provisioning, building, testing, and deploying any application anywhere.

Responsibilities:

- Involved in building parts of a highly scalable CI/CD platform with 100,000+ Docker containers spun up every month in production.
 - Technologies used — JavaScript (Angular.js + Node.js), HTML5, Bootstrap, CSS, Sass, and Git.
 - Participated in implementing features, fixing bugs, peer code reviews, holding responsibility over various product boundaries, documenting implemented features, and supporting customers in various forums.
-

Company: CenturyLink India

Company Profile: CenturyLink is a global communications and IT services company focused on connecting its customers to the power of the digital world.

Duration: March 2016 – February 2018

Project: E-Commerce

Role: Software Developer

Description: E-commerce application hosted on CenturyLink.com — an online shopping portal through which customers can order High-Speed Internet, Home Phone, and TV.

Responsibilities:

- Working as a developer on the E-commerce team, which develops and maintains the CenturyLink e-commerce website.
- Part of the ECOM Agile team, delivering requirements on direct request of the business for the e-commerce shop using the Scrum process.
- Automating and enhancing the quality of user experience by adding additional features based on business requirements.
- Worked on a web application that consumed various web services utilizing Java, JavaScript, and Velocity technologies.
- Also part of development of the Instalink site for CenturyLink prepaid customers with a mobile-first approach utilizing AngularJS and Bootstrap.

EDUCATIONAL QUALIFICATIONS

- Diploma in Advanced Computing from C-DAC ACTS, Bangalore — 2016.
- Bachelor of Engineering from Oriental College of Technology, Bhopal — 2015.

TRAINING UNDERGONE

- Four weeks of industrial training with BSNL, Bhopal, on Basic Telecom.
- Four weeks of training with HCL CDC, Bhopal, on Cisco Certified Network Associate.

Declaration: I hereby declare that the above-mentioned information is correct to the best of my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.
